

DIAMOND® STANDARD SERIES CHAIN USED IN CONCRETE PRODUCTS MANUFACTURING

CHALLENGE ▼

A leading concrete products manufacturer was looking for a quality chain that improved wear life. Due to a high concentration of dirt and concrete grit in the manufacturing environment, the chain used on their tile stacking and pallet delivery machines experienced elongation and premature chain wear.

SOLUTION ▼

Looking at potential product options, the manufacturer compared Diamond's ANSI 80 and 100 riveted roller chains to the less expensive, mid-tier brand that they were currently using.

With the strict standards of the Diamond Difference and our company's commitment to quality, Diamond's Standard Series chains ensure a high quality, long lasting product.

Using Diamond's ROI calculator, it showed the manufacturer could expect a minimum increase of 50% in wear life over their current chain.

RESULTS THAT MATTER ▼

After switching to Diamond's Standard Series chain, the manufacturer experienced an increase in uptime that exceeded the projected 50% estimate—significantly decreasing downtime and labor costs. This saved the company over \$6,500 in the first year and an estimated \$33,000 after five years.

First Year Savings
\$6,500
Five Year Savings
\$33,000
